 11. Service Unit Leader dashboard
 12. Sub-Unit Leader dashboard
 13. Approval workflows
 14. Quick reference — who sees which tab
-

Introduction

The **Salvation Ministries Admin Portal** is where staff review public registration applications, manage church locations, coordinate service units, and administer user accounts. Each person signs in with a **username or email** and **password**. What you see after login depends entirely on your **role** and **scope** (global, country, state, satellite church, service unit, or sub-unit).

This guide is organized in two ways:

- **Part 1 — Features:** Each sidebar tab is explained in plain language (what it is for, what you can do, and typical workflows).
- **Part 2 — Roles:** Each admin type gets a walkthrough of **their** menu items tab by tab.

For role permissions and limits (e.g. one Country Admin per country), see also `docs/ADMIN_ROLES.md`.

Signing in

Step	What to do
1	Open the admin URL (e.g. <code>/admin</code> on your deployment).
2	Enter username or email and password .
3	Click Sign in .

On success, the system loads your profile (name, role, branch, unit) and shows the sidebar for your role. Failed logins show an error message on the login card. Use **Sign out** at the bottom of the sidebar when finished.

Note: Usernames are **unique worldwide**. Country admins are often named like `gb.country.admin`, not a generic `country.admin`.

Shared concepts

Application (registration) statuses

Applications move through a pipeline. These are the main statuses:

Status	Meaning
New	Just submitted; not yet reviewed.
In progress	A leader is working with the candidate (calls, meetings).
Accepted	Approved as a unit member.
Rejected	Not taken into the unit.
Archived	Closed record (e.g. after accept/reject).

Overdue is not a separate status. Applications that stay **New** or **In progress** longer than the configured threshold also appear on the **Overdue** tab. Super / General Admins set the global overdue days under **Settings**; each service unit can override its own threshold.

Accepting an application

When moving from **In progress** to **Accepted**, leaders must confirm:

- They **called the candidate**
- They invited them to a **physical meeting** in church
- Optional checks: foundation class, water baptism (shown in verification modal)

These checks are stored on the record for audit purposes.

Scope

Scope means which data you are allowed to see:

- **Global** — everything (Super Admin, General Admin, Data Entry for most data).
- **Country** — one `branch_country`.
- **State** — country + `branch_state`.

- **Satellite** — country + state + `satellite_site` (church branch name).
- **Service unit** — one ministry unit (e.g. Choir, Ushering).
- **Sub-unit** — one team inside that unit.

The top bar often shows your scope label under the page title.

Theme and navigation

- **Light / Dark mode** — toggle in the top-right of the main area.
- **Sidebar badge** — the Application Queue tab can show a count of **new** applications in your scope.
- **Requests badge** — Super / General Admins see open request counts on the Requests tab.

Notifications

The notification bell (when enabled) alerts you to items such as new admin requests. Overdue applications can trigger in-app and email alerts to sub-unit leaders, with escalation to service unit leaders and satellite pastors per platform settings.

Feature reference — every tab explained

This section describes **each screen** regardless of role. Your role may hide some tabs entirely.

Overview

Also labeled: Dashboard (service leaders), Country analytics, State analytics.

Purpose: High-level picture of registrations and activity in your scope.

What you typically see:

- **Stat cards** — Total registrations, pending review, approved, overdue, and sometimes active units or in-progress counts.
- **Filters** (Super / General Admin) — Country, state, satellite branch, service unit, sub-unit, status, gender, date submitted. Filters narrow all charts and totals on the page.
- **Registration pulse** — Trend chart over selectable days (e.g. 7, 28, 90, 365).
- **Registrations by unit** — Bar chart of volume per service unit.
- **Gender breakdown** — Counts by sex.
- **Status summary** — Chips for pending, approved, rejected, waitlisted.
- **Recent activity** — Latest audit events (logins, status changes, admin changes).

Common actions:

- Click **Overdue** or stat cards to jump to the Application Queue (where supported).
- Service Unit Leaders see extra analytics (trend + gender); Sub-Unit Leaders see a dedicated analytics block.

Who has it: Super Admin, General Admin, Service Unit Leader, Sub-Unit Leader. Country and State admins use **Country/State analytics** (same Overview page id) with supervisory copy. Data Entry and Satellite Pastor use other home screens instead.

Application Queue / Intake Queue

Purpose: Work through incoming registration applications — search, filter, open details, and change status.

Layout:

1. **Status tabs** — All, New, In Progress, Accepted, Rejected, Archived, Overdue.
2. **Filters** — Search (name, email, phone), service unit, sub-unit, gender, date range, sort order.
3. **Table** — One row per applicant with key columns and expand/collapse for full details.
4. **Pagination** — Move through large lists (25 per page).

Expanded row details include:

Personal data, contact, branch (country, state, satellite), service unit and sub-unit, spiritual history (born again, foundation, baptism, WOLBI), photo, internal notes, and acceptance verification fields if already accepted.

Actions:

Action	Who
Change status (modal or quick buttons)	Leaders; Country Admin on oversight screen
Accept with verification	Required for in progress → accepted
Delete registration	Super Admin and General Admin only

Leader-specific behavior:

- Service Unit Leaders see per-sub-unit queue hints and can filter sub-units.
- Sub-Unit Leaders only see their own sub-unit's applications.
- Overdue tab lists open items past the threshold, sorted by days overdue.

Branch oversight — “Application queue” (Country & State)

Purpose: Supervisory view for **Country Admin** and **State Branch Admin** — one screen combining summary stats and a filterable application list (similar to the queue but framed for branch oversight).

Summary cards (top):

- Registrations in scope, pending, approved, units touched.

Filters:

Search, state (Country Admin only), service unit, sub-unit, status, gender, date range.

Important difference:

Role	Can change application status?
Country Admin	Yes — same accept/reject flow as leaders
State Branch Admin	No — view and filter only; status changes are done by unit leaders

State admins use this screen to monitor progress across their state; country admins can intervene on status when needed.

Unit Members

Purpose: List people whose applications are **Accepted** — your active member roster in scope.

Features:

- Search by name, email, phone.
- Filter by service unit, sub-unit, and (for country/state) branch state.
- Pagination and **Export CSV** for reporting.
- Read-only list (not the same as editing queue status).

Scope:

- Leaders see only their unit (and sub-unit for sub-unit leaders).
 - Country / State admins see accepted members across their branch geography with extra filters.
-

Service Units

Purpose: Manage the **catalog of ministry units** (e.g. Choir, Media) and their **sub-units** (teams inside each unit).

Features:

- Expand a unit to see sub-units.
- **Create unit** — Name, description, coordinator, sort order, active flag, optional overdue override per unit.
Creating a unit can optionally create a **Service Unit Leader** account in the same flow.
- **Edit / delete unit** — Delete may be blocked if registrations or admins still reference the unit (confirmation with safety checks).
- **Create / edit / delete sub-units** under each unit.

Who has it: Super Admin and General Admin only. Other roles consume units in dropdowns but cannot change structure.

Admin Accounts

Purpose: Create and maintain **login accounts** for other administrators and leaders.

Features:

- Table: name, username, email, role, scope, active/inactive, last login.
- **Create / Edit / Activate / Deactivate / Delete** (within your permission).
- **Export CSV** (global admins).
- Search and role filter (global admins).
- Pending admin requests banner when approvals are waiting.

Create form fields:

Full name, username, email, password, role, scope (country, state, satellite, unit, sub-unit), active status.

Request flow: Some roles submit a **request** instead of creating immediately; account becomes active after approval.

Locations

Purpose: Manage the **geographic directory** that powers the public registration form — countries, states/regions, and satellite churches.

Tabs inside the directory:

Tab	Contents
Satellite churches	Individual church sites (LGA, satellites)
All branches	Combined branch listing
States & regions	States within countries
Countries	Country directory entries

Actions:

- Filter by continent, country, status, search.
- **New location** — Add country, state, or church (role-dependent).
- Open a row for **detail** — activate/deactivate churches, view member stats.
- Refresh directory data.

Who can edit: Super Admin, General Admin, Data Entry Admin, Country Admin (country-scoped; cannot add new countries as Country Admin).

Branch directory

Purpose: Same underlying data as **Locations**, presented as a compact **browse/manage** view for global admins (sidebar label "Branch directory").

Use it to explore the hierarchy and manage branches without the fuller Locations layout. Capabilities match Locations for editors.

Requests

Purpose: Track **approval workflows** — things one admin submits for a higher admin to approve.

Request types:

Type	Description
Admin account	New login for state, satellite, or leader roles
Location catalog	New country/state/satellite sites from data entry
Service unit proposal	New unit + sub-units proposed from the field
General	Other messages

Columns: Date, submitter, role, type, details summary, status, actions.

Statuses: Open, in review, approved, rejected, resolved.

Approvers:

- Super / General Admin — most types, all locations.
- Country Admin — admin accounts from state/satellite in their country; service unit proposals in country.

Submitters without approve rights see **My requests** and can track status only.

Announcements

Purpose: Send targeted messages to **members**, **leaders**, or **admins** by geography and unit.

List view:

- Title, audience summary, medium (email/SMS), schedule, workflow status.
- Edit/delete (creator or global admin).

Create announcement:

- Title and body.
- **Destination type** — Members, leaders, or admins.
- **Audience scope** — Country, state, satellite, service unit, sub-unit (options depend on your role; server clamps to your jurisdiction).
- **Medium** — Email and/or SMS (SMS requires provider configuration).
- Optional schedule time.

Lower roles cannot broadcast outside their scope.

Activity Log

Purpose: **Audit trail** of important actions across the platform (or your country for Country Admin).

Logged examples:

- Admin login/logout, create/update/delete admin
- Unit create/update/delete
- Queue status changes, registration delete
- Settings updates, catalog changes, request approvals

Filters:

Search text, action type, admin user, entity type (registration, unit, admin), date range.

Use this for accountability and troubleshooting ("who changed this application?").

Settings

Purpose: **Platform configuration** — only Super Admin and General Admin.

Sections:

1. **Notification templates** — Text for approved, rejected, and waitlisted outcomes (used when notifying applicants).

2. **Overdue & alerts** — Global overdue threshold (1–30 days); explains escalation to unit leader and satellite pastor.
3. **User permissions** — Feature flags stored in app settings (enable/disable per permission key).

Click **Save Settings** after changes.

Profile / Settings

Purpose: Your own account — not platform settings.

Fields:

- Full name
- Email
- New password (optional; leave blank to keep current)

Available to roles that do not see the global **Settings** page (leaders, country, state, satellite, data entry).

Home — Data Entry dashboard

Purpose: Landing page for **Data Entry Admin**.

Explains that you add church locations via proposals. Button: **Propose new location** → opens the location proposal form.

Propose new location

Purpose: Submit a **location catalog request** for Super / General Admin approval.

Form flow:

1. Select **continent** (loads countries).
2. Select **country** (loads states).
3. Select **state/region** (loads LGA/city list).
4. Select **LGA/city**.
5. Enter one or more **satellite church names** (add rows as needed).
6. **Submit for approval**.

After approval, sites appear on the public registration form.

Dashboard — Satellite Pastor

Purpose: Home for **Satellite Pastor Admin**.

Stat cards:

Total registrations, pending, approved, overdue, active team leader count.

Quick actions:

Application Queue, Admin Accounts, Announcements, My Requests.

Super Admin dashboard

Role summary: Full platform owner. One active Super Admin per system. Only this role creates other Super Admin accounts.

Sidebar menu

Tab	What you do here
Overview	Global analytics with deep filters; trend charts; recent activity; jump to overdue queue.
Application Queue	All applications worldwide; full status control; delete registrations.
Service Units	Create/edit/delete units and sub-units; set per-unit overdue days.
Unit Members	All accepted members; export.
Locations	Full directory; add countries, states, churches.
Branch directory	Alternate directory browser.
Admin Accounts	Manage every role; export CSV; see pending requests.
Announcements	Broadcast to any audience.
Requests	Approve/reject all request types.
Activity Log	Full audit trail.
Settings	Templates, overdue, permissions.

Typical daily workflow

1. Check **Overview** for overdue and pending spikes.
2. Work **Application Queue** or delegate to country/leaders.
3. Process **Requests** (locations, new admins, units).
4. Adjust **Service Units** or **Locations** as organization changes.
5. Review **Activity Log** if issues are reported.

General Admin dashboard

Role summary: Same operational power as Super Admin **except** managing Super Admin accounts. One active General Admin per system.

Sidebar menu

Identical tabs to Super Admin.

Differences from Super Admin

Item	General Admin
Create Super Admin	No
Edit/delete Super Admin row	No (unless you are the Super Admin)
Everything else	Same as Super Admin

Use **Admin Accounts** for General Admin, Country Admin, leaders, etc., but not for promoting someone to Super Admin.

Data Entry Admin dashboard

Role summary: Add locations and support branch data globally. No platform settings or admin user management.

Sidebar menu

Tab	What you do here
Home	Read overview of data entry mission; link to propose location.
Propose new location	Submit location catalog requests.
Locations	View/edit directory within catalog rules.
Activity Log	See relevant audit events.
Profile / Settings	Update your name, email, password.

Typical workflow

1. Open **Propose new location**.
2. Complete geography and satellite names.
3. Submit and monitor approval (Super / General Admin **Requests** tab).
4. Use **Locations** to verify or maintain existing entries if needed.

What you do not have

Application Queue, Service Units, Admin Accounts, Announcements (as primary ops), Requests approval, Settings.

Country Admin dashboard

Role summary: Lead administrator for **one country**. One active account per country code.

Sidebar menu

Tab	What you do here
Country analytics	Overview stats for your country only.
Application queue	Branch oversight: filter by state, unit, sub-unit; update statuses .
Unit members	Accepted members in your country.
Admin accounts	Manage state, satellite, and leader accounts in your country.
Locations	Directory edits within your country (not new countries).
Requests & approvals	Approve state/satellite admin requests and service unit proposals in country.
Activity log	Country-scoped audit events.
Announcements	Post to country-level audiences (and below per UI rules).
Profile / Settings	Your profile.

Admin accounts — what you manage

Role	Direct create	Request required
State Branch Admin	Via request to Super/General	Yes
Satellite Pastor Admin	Create/request per process	Often request
Service Unit / Sub-Unit Leader	Yes, in country	Sub-units must already exist

You **cannot** create another Country Admin, General Admin, or Super Admin.

Typical workflow

1. Review **Country analytics** and **Application queue**.
2. Approve **Requests** from state and satellite admins.
3. Maintain **Admin accounts** for your branch structure.
4. Post **Announcements** for national coordination.

State Branch Admin dashboard

Role summary: Supervisory intake for **one state/region** within a country. One active account per state.

Sidebar menu

Tab	What you do here
State analytics	Stats for your state.
Application queue	View/filter applications; cannot change status (leaders action items).
Unit members	Accepted members in state.
Admin accounts	Request/manage Satellite Pastor Admin only.
My requests	Track submitted requests (e.g. new satellite pastor).
Activity log	State-scoped events.
Announcements	Post within state/satellite/unit scope.
Profile / Settings	Your profile.

Typical workflow

1. Monitor **State analytics** and **Application queue** for bottlenecks.
2. Request new **Satellite Pastor Admin** via **Admin accounts** or **My requests**.
3. Communicate via **Announcements** to satellites and leaders.

What you do not have

Locations tab, Service Units, Settings, direct status changes on applications.

Satellite Pastor Admin dashboard

Role summary: Pastoral oversight for **one satellite church** (country + state + site name).

Sidebar menu

Tab	What you do here
Dashboard	Registration stats, overdue, team leader count; quick links.
Application Queue	Applications for your satellite only; status updates.
Admin Accounts	View/request Service Unit and Sub-Unit leaders for your site.
My Requests	Track workforce account requests.
Announcements	Message your satellite, units, or sub-units.
Profile / Settings	Your profile.

Typical workflow

1. Start on **Dashboard** — check overdue and pending.
2. Process **Application Queue**.
3. Request team leaders under **Admin Accounts**.
4. Send **Announcements** for meetings or deadlines.

Team leaders

You see service unit and sub-unit leaders tied to your branch and satellite. New leader accounts go through **request** approval.

Service Unit Leader dashboard

Role summary: Operate one **service unit** — intake queue, members, and sub-unit admins.

Sidebar menu

Tab	What you do here
Dashboard	Unit-scoped stats, trend chart, gender breakdown, in-progress across sub-units.
Intake Queue	All applications for your unit (filter sub-units if multiple).
Members List	Accepted members in your unit.
Announcements	Target your unit or specific sub-units.
Sub-Unit Admins	Create/edit/delete Sub-Unit Leader accounts directly.
Activity Log	Audit events.
Profile / Settings	Your profile.

Intake Queue — leader actions

- Tabs: All, New, In Progress, Accepted, Rejected, Archived, Overdue.
- Quick status buttons for common transitions.
- **Accept** opens verification modal (call + meeting).
- Sub-unit leaders only see their sub-unit's rows.

Sub-Unit Admins tab

Create leaders with username, email, password, and **sub-unit name** (must already exist under your unit). You cannot invent new sub-unit names on the structure — Super / General Admin adds sub-units under **Service Units**.

Sub-Unit Leader dashboard

Role summary: Narrowest leader role — one **sub-unit** team inside a service unit.

Sidebar menu

Tab	What you do here
Dashboard	Sub-unit analytics (trend, status donut, gender).
Intake Queue	Only your sub-unit's applications.
Members List	Accepted members in your sub-unit.
Announcements	Post to your sub-unit scope.
Profile / Settings	Your profile.

Typical workflow

1. Review **Dashboard** for pending/overdue.
2. Work **Intake Queue** daily.
3. Move candidates through New → In Progress → Accepted with verification.
4. Announce reminders to your team via **Announcements**.

What you do not have

Sub-Unit Admins tab (you cannot create other admins), Service Units, Admin Accounts, Requests, Locations, Settings.

Approval workflows

Admin account request

Country / State / Satellite admin fills form → Submit request → In review
 → Super/General (or Country for in-country state/satellite) approves
 → Account created and active

Location catalog request

Data Entry submits Propose new location → Open request
 → Super/General approves → Sites published to registration form

Service unit proposal

(Field proposal) → Country or Super/General approves → Unit + sub-units created in Service Units

Quick reference — who sees which tab

Tab	Super	General	Data entry	Country	State	Satellite	Unit leader	Sub-unit leader
